Strategic partners in sustainable management

EcoSavia was established to deliver advanced technical and strategic advisory solutions to public and private entities, optimizing the sustainable management of their operational footprints.

We facilitate the development of resilient enterprises aiming to transcend basic regulatory compliance through systematic process transformation and the optimization of existing corporate assets.

Operating beyond traditional consultancy boundaries, EcoSavia acts as an embedded strategic ally, co-owning project objectives to guarantee quantifiable, value-driven outcomes.

International Standardization & Compliance Frameworks.

coSavia executes every project under the most stringent global reporting, sustainability, and governance guidelines. This guarantees data traceability, auditability, and institutional comparability before regulators and capital markets

GRI Global Reporting Initiative

TCFD Task Force on Climate-related Financial Disclosures

ISSB International Sustainability Standards Board

IFC International Finance Corporation

IDB Inter-American Development Bank

SDGs Sustainable Development Goals

Technical rigor with a scientific basis

EcoSavia operational methodology anchors every deliverable within a three-dimensional technical framework to guarantee empirical validity, commercial viability, and advanced regulatory compliance

HOW DO WE DO IT?

- Applied Technical Knowledge
- Strategic Market Intelligence
- National & International ESG Best Practices

From compliance to strategy.

EcoSavia converts environmental and social liabilities into strategic assets, enabling corporate growth through sustainable optimization, operational efficiency, and strict alignment with global ESG metrics.

We act as the nexus between sustainability and corporate strategy. EcoSavia guides organizations in maximizing resource productivity, mitigating ecological and carbon footprints, and driving quantifiable net-positive impacts across both greenfield and brownfield developments.

01

Bespoke Operational Solutions

Every project is engineered according to the specific technical requirements, regulatory risks, and corporate objectives of your organization.

03

Strategic Partners

We embed ourselves as strategic partners rather than transactional vendors, ensuring our technical execution aligns directly with your long-term corporate governance.

02

Advanced Technical Rigor

All deliverables are executed through evidence-based, scientifically backed methodologies that integrate domestic statutory requirements with international best practices.

04

Quantifiable Environmental and social Impact

We deliver verifiable, data-driven positive impacts on local ecosystems and territorial baselines, backed by rigorous metrics and audit-ready performance indicators.

Strategic Assets Delivered by EcoSavia

Tangible operational returns that enhance institutional reputation, maximize resource efficiency, and unlock premium market opportunities.

Strong corporate reputation

Mitigation and accountable management of socio-environmental impacts to strengthen institutional equity and strategic market positioning.

Operational Efficiency & Cost Optimization

Implementation of resource productivity models and energy efficiency protocols that yield significant reductions in operational expenditures (OPEX).

Quantifiable Operational Targets

Definition of granular ESG Key Performance Indicators (KPIs) and data-driven milestones backed by continuous verification systems.

Transparent Institutional Disclosures

Corporate reporting structured under global frameworks to deliver standardized, audit-ready performance data to all stakeholders.

Proactive risk management

Early identification, mapping, and quantification of material ESG risks to minimize exposure to regulatory liabilities and capital losses.

Access to Sustainable Capital Markets

Structural alignment with international disclosure benchmarks to qualify for green bonds, ESG-linked loans, and multilateral financing instruments.

Cross-Functional Organizational Integration

Systemic deployment and embedding of ESG criteria across all corporate tiers, core supply chains, and operational workflows.

Continuous Performance Optimization

Empirical progress tracking and strategic recalibrations driven by predictive data science and sector-specific industrial benchmarks.

Engineered Solutions Tailored to Your Organization

A comprehensive service portfolio designed to support every phase of your operations and project lifecycles—from initial diagnostic baseline assessments to mature sustainability leadership.

— ESG STRATEGY & REPORTING

ESG Performance Evaluation

Comprehensive diagnostic analysis and baseline determination for organizations or projects to map strategic roadmaps, achieve target KPIs, and secure regulatory compliance with international standards.

ESG Strategies & KPIs

Design of business-aligned ESG strategies and definition of granular Key Performance Indicators (KPIs) per dimension, customized to corporate milestones and organizational growth vectors.

Materiality Assessments

Identification and prioritization of material ESG topics relevant to corporate operations and stakeholder ecosystems, executed in strict accordance with global sustainability frameworks.

Framework Alignment & Reporting

Structuring and auditing corporate sustainability disclosures under IFC Performance Standards, IDB safeguards, GRI standards, TCFD, and ISSB metrics for assets and organizations.

— FINANCING & BENEFITS

Green Financing & Sustainable Credit

Technical analysis, portfolio screening, and reporting to secure capital allocation for sustainable assets and enable access to green credit instruments.

Tax Incentive Optimization

Diagnostic engineering, environmental cost evaluations, and regulatory application management to secure statutory tax exemptions and fiscal benefits tied to green technology deployment.

Sustainable Project Advisory & Subsidies

Technical management and compliance structuring to secure governmental incentives, fiscal rebates, and institutional recognition for sustainable national projects.

Environmental & Social Certification Reporting

Engineering of comprehensive technical dossiers to obtain eco-labels, green distinctions, or socio-environmental certifications awarded by federal agencies, local governments, and global civil organizations.

Risk, territory and Stakeholder Engagement

— RISK, COMPLIANCE & FEASIBILITY

Environmental and Social Due Diligence (ESDD)

Comprehensive ESG risk assessments for capital investments, mergers, acquisitions, and financing rounds, including the definition of environmental action plans and early-stage contextual management.

Technical and Economic Feasibility (Site Scouting)

Multi-criteria evaluation and site scouting for greenfield projects, brownfield expansions, and strategic operational shifts, encompassing rigorous physical, technical, socio-environmental, and cost-benefit alternative analyses.

Strategic Project Development

Design, management, deployment, and performance monitoring of high-impact corporate sustainability initiatives and business innovation projects.

Environmental Study Quality Control & Peer Review

Technical auditing and quality assurance for Environmental Impact Assessments (EIAs), compliance audits, decommissioning and abandonment plans, environmental remediation protocols, damage liability assessments, and Environmental Management Plans (EMPs).

Regulatory Compliance & International Gap Analysis

Strategic auditing of corporate alignments with emerging European Union (EU) regulations, mapping supply chain vulnerabilities, identifying operational non-compliance, and adjusting internal corporate policies to meet global ESG compliance baselines.

— TERRITORY AND STAKEHOLDER ENGAGEMENT

Social License to Operate (SLO)

Design and execution of data-driven, long-term community strategies to secure, manage, and maintain the Social License to Operate across all corporate and industrial activities.

Socio-Environmental Conflict Management

Proactive prevention, alternative dispute resolution (ADR), and mediation framework engineering to resolve grievances between corporate entities, local communities, and regional stakeholders.

Strategic Social Investment Plans

Engineering and implementation of strategic social investment frameworks designed to build local capacity, foster enduring community trust, and align regional development with corporate operational milestones.

Biodiversity Baselines & Ecosystem Mapping

Comprehensive biotic field surveying, invasive and exotic species baseline classification, and multitemporal geospatial analysis of territorial ecosystem components.

End to end Aquaculture Sustainability

International ASC (Aquaculture Stewardship Council) and BAP (Best Aquaculture Practices) standards promote responsible aquaculture production, considering environmental, social, health, and animal welfare criteria, depending on their scope.

We align your aquaculture operations with international standards, turning requirements into competitive advantages. We generate strategic value and facilitate your preparation to access international markets.

01 DIAGNOSIS

Know the starting point and prioritize actions

Diagnosis and gap analysis

Evaluation of applicable ASC and BAP requirements, identification of environmental, social, and operational gaps, and preparation of a roadmap for certification.

02 IMPLEMENTATION

Close gaps and prepare operations

Preparation for ASC and BAP certifications

Consulting to implement requirements, develop procedures, organize evidence, and prepare facilities for certification audits.

Social management and labor compliance

Evaluation of labor conditions, human rights, occupational health and safety, and community relations; development of improvement plans.

03 MONITORING

Verify results and sustain compliance

Internal audits and monitoring

Verification of compliance, document review, identification of non-conformities, and follow-up on corrective actions.

Risk management and continuous improvement

Identification and evaluation of environmental, social, and operational risks; definition of indicators, priorities, and improvement plans.

Traceability and responsible supply chain

Evaluation of traceability, suppliers, inputs, and documentary controls to strengthen transparency and compliance.

Aquaculture environmental monitoring and management

Design and execution of monitoring programs for water, effluents, sediments, and other components, in accordance with applicable requirements.

ASC and BAP technical training

Practical training for technical and operational teams on requirements, monitoring, aquaculture best practices, and evidence management.

EcoSavia provides consulting, implementation, and support for ASC and BAP standards. Certification audits and the issuance of corresponding certificates are handled by authorized and independent bodies.

Training that Transforms Corporate Culture

Tailored instructional programs and change-management frameworks engineered to drive organizational culture shifts and accelerate corporate sustainability transformations.

EcoSavia develops custom capacity-building initiatives designed to strengthen institutional skills, guarantee regulatory compliance, and scale sustainable operations. Our curriculum aligns with your Environmental Management Plan (EMP), Integrated Management Systems (IMS), and corporate standards across the following core thematic areas

› Waste Management & Minimization	› Environmental Management Plans	› Hazardous Materials & Substances (HAZMAT).
› Strategies for the responsible consumption of energy and resources.	› Human Rights & Workplace Diversity	› Integrated Management Systems
› Pollution Control & Abatement	› Socio-Environmental Conflict Resolution	› Corporate Governance & Business Ethics
› Regulatory & Statutory Legislation	› Responsible Supply Chains	› Social & Environmental Due Diligence
› Circular Economy Models	› Holistic ESG Risk Management	› Corporate Sustainability Foundations
› Climate Change & Carbon Accounting	› Socio-Environmental Impact Mitigation	› Impact Assessments & Audits

Flexible Instructional Modalities

Each program is systematically calibrated to your industry sector, corporate compliance targets, and the operational responsibility levels of the participants.
